

Information Sheet: Vision

Description

Medbar provides vision screenings using Smart Vision Labs technology. This technology is used by numerous retail vision chains. The screenings provide highly accurate prescriptions for eyeglasses and contact lens prescription renewals. Via this method, we are able to operate at lower costs, faster pace, higher accuracy and larger scale than traditional on-site vision carriers.

Medbar does not usually provide glasses on site, but can do so upon request by partnering with a local retailer or an online store. Medbar would simply collaborate on an affordable option and sell the frames and contact lenses from \$50 - \$250.

Minimum participation guarantee: 40 appointments

Pace per station: Appointment length is 10-20 minutes; 3-4 per hour per hour

Indoors or Outdoors: Indoors free, outdoors has tenting costs (depending on season and area)

Space requirements: 15 x 6 space per station; unlimited number of stations

Lead time: 3 weeks

Comments: Note that we do not issue new contact lenses or glasses for those who do not already have them – but we can provide an updated prescription.
